Problem Statement: Hackathon Management System

Description:

Develop a platform that streamlines hackathon organization by managing registrations, team formation, project submissions, leaderboards, and judge evaluations efficiently.

Expected Solution:

Key components :

- Participant & Team Management – Organizers can manage check-ins, update team-selected problem statements/domains, and ensure teams are well-supported throughout the hackathon.
- Project Submission System – Teams submit project details, including descriptions, GitHub repos, and demo links, with deadline enforcement.
- Judging & Scoring – Judges review projects and assign scores based on predefined evaluation criteria.

Additional Features to Consider

- Private scoreboard for Judges.- Enables judges to privately evaluate projects for fair and efficient scoring.

The goal is to simplify hackathon management, ensure fair evaluations, and enhance participant engagement.
